Subject Activity Report  
Week Ending 11/3/85

- Combine this with 10/85  
10/85 1. Received second car of Atlas White Cement consigned to Lehigh. Shipped a load of white bulk cement to Morse Brothers. This is the second shipment of bulk white cement.
- 10/85 2. Shipped first load of <sup>ASRACO</sup> slag to Durkee and returned with load of clinker.
- 10/85 3. Shipped a trial load of coal to Tacoma Lime. We understand that moisture and fineness caused handling problems.
- 10/85 4. Met at General Metals in Tacoma to discuss feasibility of using their equipment to unload BFS. Met later with Jones-Washington Stevedoring, who have a scow with two cranes mounted on tracks. They will quote at \$6.50/ton to unload at our wharf onto a conveyor belt system.
- 10/85 5. Pozzolin dryer from Durkee arrived. We will not assemble it until it is apparent BFS will require drying. We will then pursue six week program of proper siting and assembly for efficient operation.
- 10/85 6. MSHA presented their second "safety" session which turned out to be a supervisory training course. <sup>WE HAVE</sup> We've asked MSHA to modify the course to include a more intense focus on job safety if they want us to continue it.
7. Nellie Frank will continue one more month, until November 30th. Interviews for her replacement will be held the week of 11/11/85.
8. M.V. Apollo Ace continues to unload at Kaiser Terminal. They are experiencing significant weather interference.
9. No accidents. Visitors: Ken Gould.
